

Walcom Pty Ltd is pleased to announce that Mill-Max has expanded its USB family to include four new USB 3.0 connectors. USB 3.0, SuperSpeed USB, provides a 10 X faster data transfer rate over Hi-Speed USB with a 5 Gbps signaling rate. SuperSpeed USB is a Sync-N-Go technology that minimizes user wait time and provides optimized power efficiency. Mill-Max is offering both standard size and micro USB 3.0 connectors. USB 3.0 is fully backwards compatible with USB 2.0.

The standard style is available in Type A and Type B configurations for through-hole & SMT mounting. The connectors are fully shielded, have plug retention tabs and kinked locating legs for secure PCB retention.

Micro USB 3.0 connectors offer more options when smaller solutions are necessary. They are smaller and lighter than existing USB connectors for portable and handheld devices.
